Project Description
Rios Canyon Pump Station No. 2 Surge Tank Project (JN 220005)

This project includes the installation of a new 320 cubic foot horizontal pneumatic surge tank at the Rios Canyon Pump Station No.2, at an existing potable water pump station. The surge tank, in combination with a pressure relief valve, will provide surge protection considered adequate to protect PS-2 from adverse pressure transients.

The surge tank will be located generally east of the pump station building within the property limits on a reinforced concrete equipment pad.

Other secondary improvements include:

- Installation of new piping and fittings
- Installation of new Electrical conduit and wire and instrumentation
- Demolition of existing 16-inch plug valve and vault. All debris removed from the site will be disposed at an appropriate landfill.
- Backfill; removal and disposal of soil, import material, compaction; and pavement repair.

All of the above improvement will occur within the property limits which has been designated as completely disturbed (i.e. paved) or previously disturbed. The areas south, southeast, and southwest of the property limits are designated as sensitive habitat and includes Southern Willow Scrub, Coastal Live Oak Woodland, and Diegan Coastal Sage Scrub. Although, no direct construction impacts will occur to the areas designated as sensitive habitat, construction noise could potentially indirectly impact species. Therefore, construction activities will occur between September 15th and February 15th in order to avoid the combined nesting season.
